

The email address should be a clickable mailto link built by creating a plugin within the cell. And Robin's job title should be on a separate line to his name. In the third row, we use the newer and easier table cell properties "href" and "destination".

Name	Email
Robin Becker (chief propellerhead)	<a href="mailto:robin@reportlab.com">mailto:robin@reportlab.com</a>
<a href="#">Internal link to back page</a>	<a href="#">Hyperlink to www.reportlab.com</a>

This should be a 5x5 table where some ranges span. Note that the grid and background commands still work on the "underlying" grid; if you grid the whole table, it will show through your 'spanned cells'

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command.  some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

This should be a 5x5 table where some ranges span. The column widths have been set as 3cm,10%,10%,10%,30%. The percentage refers to unallocated width only.

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command.  some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

This shows some pointers on doing financial tables. It demonstrates the decimal alignment and multiple lines. We also used a local `<td color="red">` attribute for the negative cell; ideally one wants to make the data drive the colour, so that generator apps don't need to make para tags in every cell if they want red negatives. If we move to dynamic RML, then a number-and-cell-formatting function is possible, but static RML sees everything as text. Note that when the value does not contain the decimal character but there are non-digit characters at the end, it tries to align the rightmost digits with other rows.

Corporate Assets	Amount
Fixed Assets	1,234,567.89
Legal Offense Fund	86,000,000
Company Vehicle	1,234.8901
Petty Cash	42
Intellectual Property	Questionable
Bank Overdraft	(13,029)
Goodwill	(742,078,231.56)
Flat Screen TV	27 inches
Net Position	Doomed. Really!

Individual <td> tags that contain pure strings can override the following attributes: `fontName`, `fontSize`, `fontColor`, `leading`, `leftPadding`, `rightPadding`, `topPadding`, `bottomPadding`, `background`, `align`, `vAlign`, `lineBelowThickness`, `lineBelowColor`, `lineBelowCap`, `lineBelowCount`, `lineBelowSpace`, `lineAboveThickness`, `lineAboveColor`, `lineAboveCap`, `lineAboveCount`, `lineAboveSpace`, `lineLeftThickness`, `lineLeftColor`, `lineLeftCap`, `lineLeftCount`, `lineLeftSpace`, `lineRightThickness`, `lineRightColor`, `lineRightCap`, `lineRightCount`, `lineRightSpace` .

<i>fontName</i>	Courier
<i>fontName</i>	Helvetica
<i>fontSize</i>	8
<i>fontSize</i>	14
<i>fontColor</i>	red
<i>fontColor</i>	blue
<i>leading</i>	leading is 16
<i>leading</i>	leading is 12
<i>leftPadding</i>	10
<i>leftPadding</i>	16
<i>rightPadding</i>	10
<i>rightPadding</i>	24
<i>topPadding</i>	10
<i>topPadding</i>	24
<i>bottomPadding</i>	10
<i>bottomPadding</i>	24
<i>background</i>	pink
<i>background</i>	lightblue
<i>align</i>	left
<i>align</i>	center
<i>align</i>	right
- <i>vAlign</i> -	top
- <i>vAlign</i> -	middle

- <i>vAlign</i> -	<i>bottom</i>
<i>lineBelow</i>	<i>right</i>

This table is using **<xpre>** tags around the contents of the right hand column.

- <i>vAlign</i> -	bottom

## Bulk Data Support

Very often one wants to get quite a lot of text or numeric data into a table - for example from a database query or imported data file. Quoting all of this correctly as XML and wrapping in in `td` and `tr` tags is time and memory consuming, unquoting and parsing it all back even more so. Therefore, instead of explicitly creating row and cell tags, you can now use a new **bulkData** tag. This lets you specify a delimiter for fields (default is comma) and for records (default is newline), and `rml2pdf` will break this up.

If you want to avoid having to quote ampersands, wrap this in a CDATA escape sequence.

Of course if you want per-cell formatting or to put arbitrary flowables in a cell, you must use the other tags.

Product	Profit
Sprockets	26
Widgets	34
Thingummies	217
Bits & Bobs	23
<b>Total</b>	<b>277</b>

You can specify a tab with **fieldDelim="\t"**, but we generally advise against using any whitespace character as a delimiter if you have a choice. You can also specify fine-grained "stripping" control; the default behaviour is to strip whitespace off the top and bottom of the overall data block, so blank lines are excluded, and off the ends of each row so line endings and indentation don't matter, but not off each cell. Note that the strings in the cells may contain spaces and these spaces will be respected in formatting. You are also advised to use a CDATA escape sequence around your data so that "&", "<" and ">", characters don't need special handling.

## Excel Bulk Data Support

The **excelData** tag is very similar to the bulk data support, but reads the bulk data from an Excel file instead of from delimited textual data. The **range** attribute is optional.

**Sorry Ecel Bulk Support is not yet here**

## Colour cycles by rows and columns

It's sometimes nice to alternate colours by row (e.g. a pale color then white) to visually break up a long table. The style lets you specify **cycles** as well as single colours. Here we have created a style command which cycles through pale green and white, like old stacks of fanfold paper...

Try again by column, with three colors this time. Also ensure some row heights vary to check accuracy of drawing.

[illegible]

And now by column (although this may be used less...)

[illegible]

## Splitting over pages - top and bottom rows

Sometimes a table splits over a page and you don't have a grid, so the bottom part (and top of the new page) have no line boxing them in. The `splitfirst` and `splitlast` magic coordinates can be used to insert a line drawing routine into the style for this. I used an ugly thick purple line!
