

The <keepTogether> tag will keep a set of child flowables in the same frame as much as possible. Unlike <keepInFrame>, it will not shrink the contents to do this. It adds frame breaks when necessary instead.

In this example, we try to keep 3 paragraphs together. Since they can not all fit into the same frame as this paragraph, they will all appear in the next page together.

This is the 1st paragraph of 3 that we wish to keep together. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space.

This is the 2nd paragraph of 3 that we wish to keep together. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space.

This is the 3rd paragraph of 3 that we wish to keep together. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some nonsense text to fill up the space. Some

nonsense text to fill up the  
space. Some nonsense text to  
fill up the space.
