The <keepTogether> tag will keep a set of child flowables in the same frame as much as possible. Unlike <keepInFrame>, it will not shrink the contents to do this. It adds frame breaks when necessary instead.

In this example, we try to keep 3

In this example, we try to keep 3 paragraphs together. Since they can not all fit into the same frame as this paragraph, they will all appear in the next page together.

This is the 1st paragraph of 3 that we wish to keep together.

Some nonsense text to fill up the space. Some nonsense text to fill up the space.

This is the 2nd paragraph of 3 that we wish to keep together.

Some nonsense text to fill up the space. Some nonsense text to fill up the space.

This is the 3rd paragraph of 3 that we wish to keep together.

Some nonsense text to fill up the space. Some nonsense text to fill up the space.
