z3c.RML Reference

Version 0.5

Introduction

RML is a XML dialect for generating PDF files. Like HTML produces a page within the browser, RML produces a PDF file. The RML processor uses the ReportLab library to convert the RML text into a full PDF template.

The original version of RML was developed by ReportLab, Inc. as a commercial extension to the free ReportLab library. This original version of RML is still available and supported by ReportLab, Inc. This version of RML, z3c.RML, is a free implementation of the XML dialect based on the available documentation. While it tries to keep some level of compatibility with the original version of RML, it is intended to provde a as clean and feature-rich API as possible.

The contents of this document is auto-generated from the code itself and should thus be very accurate and complete.

Attribute Types

This section list the types of attributes used for the attributes within the RML elements.

Boolean

A boolean value. For true the values "true", "yes", and "1" are allowed. For false, the values "false", "no", "1" are allowed.

BooleanWithDefault

This is a boolean field that can also receive the value "default".

Choice

A choice of several values. The values are always case-insensitive.

Color

Requires the input of a color. There are several supported formats. Three values in a row are interpreted as RGB value ranging from 0-255. A string is interpreted as a name to a pre-defined color. The 'CMYK()' wrapper around four values represents a CMYK color specification.

Combination

A combination of several other attribute types.

File

This field will return a file object. The value itself can eith be be a relative or absolute path. Additionally the following syntax is supported: [path.to.python.mpackage]/path/to/file

FirstLevelTextNode

Gets all the text content of an element without traversing into any child-elements.

Float

An flaoting point. A minimum and maximum value can be specified.

Image

Similar to the file File attribute, except that an image is internally expected.

Integer

An integer. A minimum and maximum value can be specified.

Measurement

This field represents a length value. The units "in" (inch), "cm", and "mm" are allowed. If no units are specified, the value is given in points/pixels.

PageSize

A simple measurement pair that specifies the page size. Optionally you can also specify a the name of a page size, such as A4, letter, or legal.

RawXMLContent

Retrieve the raw content of an element. Only some special element substitution will be made.

Sequence

A list of values of a specified type.

String

A simple Bytes string.

StringOrInt

A (bytes) string or an integer.

Style

Requires a valid style to be entered. Whether the style is a paragraph, table or box style is irrelevant, except that it has to fit the tag.

Symbol

This attribute should contain the text representation of a symbol to be used.

Text

A simple unicode string.

TextNode

Return the text content of an element.

TextNodeGrid

A grid/matrix of values retrieved from the element's content. The number of columns is specified for every case, but the number of rows is dynamic.

TextNodeSequence

A sequence of values retrieved from the element's content.

XMLContent

Same as 'RawXMLContent', except that the whitespace is normalized.

Directives

Sets one paramter for the text annotation.

Attributes

```
name (required) - String Name: The name of the paramter.
```

Content

```
TextNode (required)
Value: The parameter value.
```

alias

Defines an alias for a given style.

Attributes

```
id (required) - StringId: The id as which the style will be known.value (required) - StyleValue: The style that is represented.
```

Examples

```
<alias id="h1" value="style.Heading1"/>
(Extracted from file tag-alias.rml, line 15)
```

har

Define the look of a bar.

Attributes

Examples

```
<bar fillColor="blue" strokeColor="red" strokeWidth="0.5"/>
(Extracted from file tag-barChart.rml, line 25)
```

barChart

Creates a two-dimensional bar chart.

Attributes

```
dx - Measurement
```

Drawing X-Position: The x-position of the entire drawing on the canvas.

```
dv - Measurement
```

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

```
dheight - Measurement
     Drawing Height: The height of the entire drawing
   angle - Float
     Angle: The orientation of the drawing as an angle in degrees.
   x - Measurement
     Chart X-Position: The x-position of the chart within the drawing.
   v - Measurement
      Chart Y-Position: The y-position of the chart within the drawing.
   width - Measurement
      Chart Width: The width of the chart.
   height - Measurement
     Chart Height: The height of the chart.
   strokeColor - Color
     Stroke Color: Color of the chart border.
   strokeWidth - Measurement
     Stroke Width: Width of the chart border.
   fillColor - Color
     Fill Color: Color of the chart interior.
   debug - Boolean
     Debugging: A flag that when set to True turns on debug messages.
   direction - Choice of ('horizontal', 'vertical')
     Direction: The direction of the bars within the chart.
   useAbsolute - Boolean
      Use Absolute Spacing: Flag to use absolute spacing values.
   barWidth - Measurement
     Bar Width: The width of an individual bar.
   groupSpacing - Measurement
     Group Spacing: Width between groups of bars.
   barSpacing - Measurement
     Bar Spacing: Width between individual bars.
Sub-Directives
   data (One)
   bars (ZeroOrOne)
   categoryAxis (ZeroOrOne)
   valueAxis (ZeroOrOne)
   texts (ZeroOrOne)
Examples
                height="3in" barSpacing="7" groupSpacing="15">
```

```
<barchart dx="2in" dy="7in" dwidth="6in" dheight="4in" x="0" y="0" width="5in"</pre>
 <bars>
   <bar fillColor="blue" strokeColor="red" strokeWidth="0.5"/>
   <bar fillColor="yellow" strokeColor="green" strokeWidth="1"/>
 <categoryAxis strokeColor="black" strokeWidth="1">
   <labels fontName="Helvetica"/>
   <categoryNames>
     <name>Category 1
     <name>Category 2
     <name>Category 3
     <name>Category 4</name>
   </categoryNames>
 </categoryAxis>
```

barChart3D

Creates a three-dimensional bar chart.

Attributes

dx - Measurement

Drawing X-Position: The x-position of the entire drawing on the canvas.

dy - Measurement

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

dheight - Measurement

Drawing Height: The height of the entire drawing

angle - Float

Angle: The orientation of the drawing as an angle in degrees.

x - Measurement

Chart X-Position: The x-position of the chart within the drawing.

y - Measurement

Chart Y-Position: The y-position of the chart within the drawing.

width - Measurement

Chart Width: The width of the chart.

height - Measurement

Chart Height: The height of the chart.

strokeColor - Color

Stroke Color: Color of the chart border.

strokeWidth - Measurement

Stroke Width: Width of the chart border.

fillColor - Color

Fill Color: Color of the chart interior.

debug - Boolean

Debugging: A flag that when set to True turns on debug messages.

direction - Choice of ('horizontal', 'vertical')

Direction: The direction of the bars within the chart.

useAbsolute - Boolean

Use Absolute Spacing: Flag to use absolute spacing values.

barWidth - Measurement

Bar Width: The width of an individual bar.

groupSpacing - Measurement

Group Spacing: Width between groups of bars.

barSpacing - Measurement

Bar Spacing: Width between individual bars.

thetaX - Float

```
Theta-X: Fraction of dx/dz.
  thetaY - Float
     Theta-Y: Fraction of dy/dz.
  zDepth - Measurement
     Z-Depth: Depth of an individual series/bar.
  zSpace - Measurement
     Z-Space: Z-Gap around a series/bar.
Sub-Directives
  data (One)
  bars (ZeroOrOne)
  categoryAxis (ZeroOrOne)
  valueAxis (ZeroOrOne)
  texts (ZeroOrOne)
Examples
   <barchart3D dx="2in" dy="4in" dwidth="6in" dheight="4in" x="0" y="0"</pre>
                 width="5in" height="2in" thetaX="0.3" thetaY="0.3" zDepth="5"
                 zSpace="10" direction="vertical">
     <categoryAxis strokeColor="black" strokeWidth="1" visibleGrid="true">
       <labels fontName="Helvetica"/>
       <categoryNames>
          <name>Category 1
          <name>Category 2
          <name>Category 3</name>
          <name>Category 4
       </categoryNames>
     </categoryAxis>
     <valueAxis valueMin="0" valueMax="150" valueStep="30" visibleTicks="true"</pre>
                  visibleLabels="true" visibleGrid="true">
       <labels fontName="Helvetica"/>
     </valueAxis>
       <series>100 110 120 130
       <series> 70  80  85  90</series>
     </data>
   </barChart3D>
  (Extracted from file tag-barChart3d.rml, line 48)
barCode
A barcode graphic.
Attributes
  code (required) - Choice of ('ean13', 'extended39', 'standard39', 'ean8', 'extended93', 'codabar', 'msi',
  'postnet', 'fim', 'code11', 'standard93', 'i2of5', 'code128')
     Code: The name of the type of code to use.
  width - Measurement
     Width: The width of the barcode.
  height - Measurement
     Height: The height of the barcode.
  strokeColor - Color
     Stroke Color: The color of the line strokes in the area.
  strokeWidth - Measurement
     Stroke Width: The width of the line strokes in the area.
  fillColor - Color
```

Fill Color: The color of the filled shapes in the area.

barStrokeColor - Color

Bar Stroke Color: The color of the line strokes in the barcode.

barStrokeWidth - Measurement

Bar Stroke Width: The width of the line strokes in the barcode.

barFillColor - Color

Bar Fill Color: The color of the filled shapes in the barcode.

gap - Measurement

Gap: The width of the inter-character gaps.

barWidth - Measurement

Bar Width: The width of the smallest bar within the barcode

barHeight - Measurement

Bar Height: The height of the symbol.

ratio - Float

Ratio: The ratio of wide elements to narrow elements. Must be between 2.0 and 3.0 (or 2.2 and 3.0 if the barWidth is greater than 20 mils (.02 inch)).

checksum - Integer

Ratio: A flag that enables the computation and inclusion of the check digit.

bearers - Float

Bearers: Height of bearer bars (horizontal bars along the top and bottom of the barcode). Default is 3 x-dimensions. Set to zero for no bearer bars.(Bearer bars help detect misscans, so it is suggested to leave them on).

quiet - Boolean

Quiet Zone: A flag to include quiet zones in the symbol.

lquiet - Measurement

Left Quiet Zone: Quiet zone size to the left of code, if quiet is true. Default is the greater of .25 inch or .15 times the symbol's length.

rquiet - Measurement

Right Quiet Zone: Quiet zone size to the right of code, if quiet is true. Default is the greater of .25 inch or .15 times the symbol's length.

fontName - String

Font Name: The font used to print the value.

fontSize - Measurement

Font Size: The size of the value text.

humanReadable - Boolean

Human Readable: A flag when set causes the value to be printed below the bar code.

stop - Boolean

Show Start/Stop: A flag to specify whether the start/stop symbols are to be shown.

spaceWidth - Measurement

Space Width: The space of the inter-character gaps.

shortHeight - Measurement

Short Height: The height of the short bar.

textColor - Color

Text Color: The color of human readable text.

x - Measurement

X-Position: The x-position of the lower-left corner of the barcode.

y - Measurement

Y-Position: The y-position of the lower-left corner of the barcode.

Content

TextNode (required)

Value: The value represented by the code.

Examples

barCodeFlowable

Creates a bar code as a flowable.

Attributes

```
code (required) - Choice of ('ean13', 'extended39', 'standard39', 'ean8', 'extended93', 'codabar', 'msi', 'postnet', 'fim', 'code11', 'standard93', 'i2of5', 'code128')
Code: The name of the type of code to use.
```

width - Measurement

Width: The width of the barcode.

height - Measurement

Height: The height of the barcode.

strokeColor - Color

Stroke Color: The color of the line strokes in the area.

strokeWidth - Measurement

Stroke Width: The width of the line strokes in the area.

fillColor - Color

Fill Color: The color of the filled shapes in the area.

barStrokeColor - Color

Bar Stroke Color: The color of the line strokes in the barcode.

barStrokeWidth - Measurement

Bar Stroke Width: The width of the line strokes in the barcode.

barFillColor - Color

Bar Fill Color: The color of the filled shapes in the barcode.

gap - Measurement

Gap: The width of the inter-character gaps.

barWidth - Measurement

Bar Width: The width of the smallest bar within the barcode

barHeight - Measurement

Bar Height: The height of the symbol.

ratio - Float

Ratio: The ratio of wide elements to narrow elements. Must be between 2.0 and 3.0 (or 2.2 and 3.0 if the barWidth is greater than 20 mils (.02 inch)).

checksum - Integer

Ratio: A flag that enables the computation and inclusion of the check digit.

bearers - Float

Bearers: Height of bearer bars (horizontal bars along the top and bottom of the barcode). Default is 3 x-dimensions. Set to zero for no bearer bars.(Bearer bars help detect misscans, so it is suggested to leave them on).

quiet - Boolean

Quiet Zone: A flag to include quiet zones in the symbol.

lquiet - Measurement

Left Quiet Zone: Quiet zone size to the left of code, if quiet is true. Default is the greater of .25 inch or .15 times the symbol's length.

rquiet - Measurement

Right Quiet Zone: Quiet zone size to the right of code, if quiet is true. Default is the greater of .25 inch or .15 times the symbol's length.

fontName - String

Font Name: The font used to print the value.

fontSize - Measurement

Font Size: The size of the value text.

humanReadable - Boolean

Human Readable: A flag when set causes the value to be printed below the bar code.

stop - Boolean

Show Start/Stop: A flag to specify whether the start/stop symbols are to be shown.

spaceWidth - Measurement

Space Width: The space of the inter-character gaps.

shortHeight - Measurement

Short Height: The height of the short bar.

textColor - Color

Text Color: The color of human readable text.

value (required) - String

Value: The value represented by the code.

Examples

bars

Collection of bar subscriptions.

Attributes

```
strokeColor - Color
```

Stroke Color: The color in which the bar border is drawn.

strokeWidth - Measurement

Stroke Width: The width of the bar border line.

fillColor - Color

Fill Color: The color with which the bar is filled.

Sub-Directives

bar (ZeroOrMore)

blockAlignment

Set the text alignment.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')

End Coordinates: The end table coordinates for the style instruction

value (required) - Choice of ('decimal', 'right', 'center', 'centre', 'left')
Text Alignment: The text alignment within the cell.

Examples

```
<blockAlignment start="0,0" stop="-1,1" value="center"/>
(Extracted from file tag-blockTableStyle.rml, line 16)
```

blockBackground

Define the background color of the cells. It also supports alternating colors.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

colorName - Color

Color Name: The color to use as the background for every cell.

colorsByRow - Sequence of Color

Colors By Row: A list of colors to be used circularly for rows.

colorsByCol - Sequence of Color

Colors By Column: A list of colors to be used circularly for columns.

Examples

```
<blockBackground start="1,1" stop="-2,-2" colorName="green"/>
(Extracted from file tag-blockTableStyle.rml, line 18)
```

blockBottomPadding

Set the bottom padding of the cells.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

length (*required*) - Measurement *Length*: The size of the padding.

Examples

```
<blockBottomPadding start="0,0" stop="-1,1" length="5mm"/>
(Extracted from file tag-blockTableStyle.rml, line 24)
```

blockColBackground

Define the background colors for columns.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

colorNames (required) - Sequence of Color

Colors By Row: A list of colors to be used circularly for rows.

Examples

```
<blockColBackground start="0,0" stop="2,-1" colorNames="red green"/>
(Extracted from file tag-blockTableStyle.rml, line 37)
```

blockFont

Set the font properties for the texts.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

name - String

Font Name: The name of the font for the cell.

size - Measurement

Font Size: The font size for the text of the cell.

leading - Measurement

Leading: The height of a single text line. It includes character height.

Examples

```
<blockFont start="0,0" stop="1,-1" name="Courier" size="14" leading="18"/>
(Extracted from file tag-blockTableStyle.rml, line 29)
```

blockLeading

Set the text leading.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

length (required) - Measurement

Length: The height of a single text line. It includes character height.

Examples

```
<blockLeading start="0,0" stop="-1,1" length="18"/>
(Extracted from file tag-blockTableStyle.rml, line 43)
```

blockLeftPadding

Set the left padding of the cells.

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

length (*required*) - Measurement *Length*: The size of the padding.

Examples

```
<blockLeftPadding start="0,0" stop="-1,1" length="5mm"/>
(Extracted from file tag-blockTableStyle.rml, line 26)
```

blockRightPadding

Set the right padding of the cells.

Attributes

start (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *Start Coordinates*: The start table coordinates for the style instruction

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

length (required) - Measurement *Length*: The size of the padding.

Examples

```
<blockRightPadding start="0,0" stop="-1,1" length="5mm"/>
(Extracted from file tag-blockTableStyle.rml, line 22)
```

blockRowBackground

Define the background colors for rows.

Attributes

```
    start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
    Start Coordinates: The start table coordinates for the style instruction
    stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
```

End Coordinates: The end table coordinates for the style instruction

colorNames (required) - Sequence of Color

Colors By Row: A list of colors to be used circularly for rows.

Examples

```
<blockRowBackground start="3,0" stop="-1,-1" colorNames="blue yellow"/>
(Extracted from file tag-blockTableStyle.rml, line 40)
```

blockSpan

Define a span over multiple cells (rows and columns).

Attributes

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') 
Start Coordinates: The start table coordinates for the style instruction
```

stop (*required*) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast') *End Coordinates*: The end table coordinates for the style instruction

Examples

```
<blockSpan start="0,0" stop="2,2"/>
(Extracted from file tag-blockTableStyle.rml, line 48)
```

blockTable

A typical block table.

Attributes

```
style - Style
```

Style: The table style that is applied to the table.

rowHeights - Sequence of Measurement

Row Heights: A list of row heights in the table.

colWidths - Sequence of Measurement

Column Widths: A list of column widths in the table.

repeatRows - Integer

Repeat Rows: A flag to repeat rows upon table splits.

Sub-Directives

```
tr (ZeroOrMore)
bulkData (ZeroOrOne)
blockTableStyle (ZeroOrMore)
```

Examples

blockTableStyle

A style defining the look of a table.

Attributes

```
id (required) - StringId: The name/id of the style.
```

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

Sub-Directives

```
blockFont (ZeroOrMore)
blockLeading (ZeroOrMore)
blockTextColor (ZeroOrMore)
blockAlignment (ZeroOrMore)
blockLeftPadding (ZeroOrMore)
blockRightPadding (ZeroOrMore)
blockBottomPadding (ZeroOrMore)
blockTopPadding (ZeroOrMore)
blockBackground (ZeroOrMore)
blockRowBackground (ZeroOrMore)
blockColBackground (ZeroOrMore)
blockValign (ZeroOrMore)
blockSpan (ZeroOrMore)
```

Examples

blockTextColor

Set the text color.

```
    start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
        Start Coordinates: The start table coordinates for the style instruction
    stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
        End Coordinates: The end table coordinates for the style instruction
    colorName (required) - Color
```

Color Name: The color in which the text will appear.

Examples

```
<blockTextColor start="0,0" stop="1,-1" colorName="red"/>
(Extracted from file tag-blockTableStyle.rml, line 31)
```

blockTopPadding

Set the top padding of the cells.

Attributes

```
    start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
    Start Coordinates: The start table coordinates for the style instruction
    stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
    End Coordinates: The end table coordinates for the style instruction
    length (required) - Measurement
    Length: The size of the padding.
```

Examples

```
<blockTopPadding start="0,0" stop="-1,1" length="5mm"/>
(Extracted from file tag-blockTableStyle.rml, line 20)
```

blockValign

Define the vertical alignment of the cells.

Attributes

```
    start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
        Start Coordinates: The start table coordinates for the style instruction
    stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
        End Coordinates: The end table coordinates for the style instruction
    value (required) - Choice of ('middle', 'top', 'bottom')
        Vertical Alignment: The vertical alignment of the text with the cells.
```

Examples

```
<blockValign start="0,0" stop="2,2" value="middle"/>
(Extracted from file tag-blockTableStyle.rml, line 53)
```

bookmark

This creates a bookmark to the current page which can be referred to with the given key elsewhere. PDF offers very fine grained control over how Acrobat reader is zoomed when people link to this. The default is to keep the user's current zoom settings. the last arguments may or may not be needed depending on the choice of 'fitType'.

```
name (required) - Text
Name: The name of the bookmark.
fitType - Choice of ('fitr', 'fith', 'fitv', 'fit')
Fit Type: The Fit Type.
left - Measurement
Left: The left position.
top - Measurement
Top: The top position.
right - Measurement
Right: The right position.
zoom - Float
```

Zoom: The zoom level when clicking on the bookmark.

Examples

bulkData

Bulk Data allows one to quickly create a table.

Content

TextNodeSequence of Sequence of Text (required) Content: The bulk data.

Examples

```
<bulkData>
Product,Profit
Sprockets,26
Widgets,34
Thingummies,217
Bits &amp; Bobs,23
Total,277
</bulkData>
(Extracted from file tag-blockTable-bulkData.rml, line 16)
```

buttonField

A button field within the PDF

Attributes

categoryAxis

```
visible - Boolean
visibleAxis - Boolean
visibleTicks - Boolean
visibleLabels - Boolean
visibleGrid - Boolean
strokeWidth - Measurement
strokeColor - Color
strokeDashArray - Sequence of Float
gridStrokeWidth - Measurement
gridStrokeColor - Color
```

```
gridStrokeDashArray - Sequence of Float
   gridStart - Measurement
   gridEnd - Measurement
  style - Choice of ('stacked', 'parallel', 'parallel_3d')
  categoryNames - Sequence of Text
  joinAxis - Boolean
  joinAxisPos - Measurement
   reverseDirection - Boolean
  labelAxisMode - Choice of ('high', 'low', 'axis')
  tickShift - Boolean
Sub-Directives
   categoryNames (ZeroOrOne)
  labels (ZeroOrMore)
categoryNames
Attributes
   visible - Boolean
   visibleAxis - Boolean
   visibleTicks - Boolean
   visibleLabels - Boolean
   visibleGrid - Boolean
   strokeWidth - Measurement
   strokeColor - Color
  strokeDashArray - Sequence of Float
   gridStrokeWidth - Measurement
   gridStrokeColor - Color
   gridStrokeDashArray - Sequence of Float
   gridStart - Measurement
   gridEnd - Measurement
   style - Choice of ('stacked', 'parallel', 'parallel_3d')
Sub-Directives
  name (OneOrMore)
circle
Draws a circle on the canvas.
Attributes
  x (required) - Measurement
     X-Coordinate: The X-coordinate of the lower-left position of the shape.
  v (required) - Measurement
     Y-Coordinate: The Y-coordinate of the lower-left position of the shape.
  fill - Boolean
     Fill: A flag to specify whether the shape should be filled.
  stroke - Boolean
     Stroke: A flag to specify whether the shape's outline should be drawn.
```

radius (required) - Measurement

Radius: The radius of the circle.

Examples

```
<circle x="10cm" y="25cm" radius="2cm" fill="false" stroke="false"/>
(Extracted from file tag-circle.rml, line 10)
```

color

Define a new color and give it a name to be known under.

Attributes

```
id (required) - StringId: The id/name the color will be available under.
```

 \mathbf{RGB} (required) - Color

Color: The color value that is represented.

condPageBreak

Switch to the next page if not enough vertical space is available.

Attributes

```
height (required) - Measurement height: The minimal height that must be remaining on the page.
```

curves

A path of connected bezier curves drawn on the canvas.

Content

TextNodeGrid with 8 cols of Measurement (required) Curve List: A list of curve coordinates to draw.

Examples

```
curves>
  lin lin 2in 2in 2in 3in lin 3in
  lin 2in 2in 3in 2in 4in lin 4in
  lin 3in 2in 4in 2in 5in lin 5in
</curves>
(Extracted from file tag-curves.rml, line 9)
```

curvesto

Create a bezier curve from the current location to the specified one.

Content

```
TextNodeGrid with 6 cols of Measurement (required)

Curve Specification: Describes the end position and the curve properties.
```

data

A 1-D data set.

Sub-Directives

```
series (OneOrMore)
```

data

A 2-D data set.

Sub-Directives

```
series (OneOrMore)
```

data

A 1-D data set.

Sub-Directives

series (One)

docinit

Sub-Directives

```
registerType1Face (ZeroOrMore)
registerFont (ZeroOrMore)
registerTTFont (ZeroOrMore)
registerCidFont (ZeroOrMore)
color (ZeroOrMore)
```

document

Attributes

filename (required) - String

File Name: The default name of the output file, if no output file was provided.

debug - Boolean

Debug: A flag to activate the debug output.

compression - BooleanWithDefault

Compression: A flag determining whether page compression should be used.

invariant - BooleanWithDefault

Invariant: A flag that determines whether the produced PDF should be invariant with respect to the date and the exact contents.

Sub-Directives

```
docinit (ZeroOrOne)
stylesheet (ZeroOrOne)
template (ZeroOrOne)
story (ZeroOrOne)
pageInfo (ZeroOrOne)
pageDrawing (ZeroOrMore)
```

drawAlignedString

Draws a simple string (aligned to the pivot character) onto the canvas at the specified location.

Attributes

```
    x (required) - Measurement
        X-Coordinate: The X-coordinate of the lower-left position of the string.
    y (required) - Measurement
        Y-Coordinate: The Y-coordinate of the lower-left position of the string.
```

```
pivotChar (required) - Text
```

Text: The string/text that is put onto the canvas.

Content

```
TextNode (required)
```

Text: The string/text that is put onto the canvas.

Examples

```
<drawAlignedString x="4.1in" y="9.8in">$ 13.63/drawAlignedString>
(Extracted from file tag-drawAlignedString.rml, line 11)
```

drawCenteredString

Draws a simple string (centered aligned) onto the canvas at the specified location.

Attributes

```
x (required) - Measurement
```

X-Coordinate: The X-coordinate of the lower-left position of the string.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the string.

Content

TextNode (required)

Text: The string/text that is put onto the canvas.

drawRightString

Draws a simple string (right aligned) onto the canvas at the specified location.

Attributes

```
x (required) - Measurement
```

X-Coordinate: The X-coordinate of the lower-left position of the string.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the string.

Content

TextNode (required)

Text: The string/text that is put onto the canvas.

Examples

```
<drawRightString x="4.1in" y="5.8in">Hello World./drawRightString>
(Extracted from file tag-drawRightString.rml, line 12)
```

drawString

Draws a simple string (left aligned) onto the canvas at the specified location.

Attributes

x (required) - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the string.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the string.

Content

TextNode (required)

Text: The string/text that is put onto the canvas.

Examples

```
<drawString x="4.1in" y="5.8in">Hello World.
(Extracted from file tag-drawString.rml, line 9)
```

ellipse

Draws an ellipse on the canvas.

Attributes

```
x (required) - Measurement
```

X-Coordinate: The X-coordinate of the lower-left position of the shape.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the shape.

fill - Boolean

Fill: A flag to specify whether the shape should be filled.

stroke - Boolean

Stroke: A flag to specify whether the shape's outline should be drawn.

width (required) - Measurement Width: The width of the ellipse.

height (*required*) - Measurement *Height*: The height of the ellipse.

Examples

fill

Set the fill color.

Attributes

color (required) - Color Color: The color value to be set.

fixedSize

Create a container flowable of a fixed size.

Attributes

width (required) - Measurement

Width: The width the flowables are allotted.

height (required) - Measurement

Height: The height the flowables are allotted.

frame

A frame on a page.

Attributes

x1 (required) - Measurement

X-Position: The X-Position of the lower-left corner of the frame.

y1 (required) - Measurement

Y-Position: The Y-Position of the lower-left corner of the frame.

width (required) - Measurement *Width*: The width of the frame.

height (required) - Measurement

Height: The height of the frame.

id - Text

Id: The id of the frame.

leftPadding - Measurement

Left Padding: The left padding of the frame.

rightPadding - Measurement

Right Padding: The right padding of the frame.

topPadding - Measurement

Top Padding: The top padding of the frame.

bottomPadding - Measurement

Bottom Padding: The bottom padding of the frame.

showBoundary - Boolean

Show Boundary: A flag to show the boundary of the frame.

grid

A shape to be drawn on the canvas.

Attributes

xs (required) - Sequence of Measurement

X-Coordinates: A sequence x-coordinates that represent the vertical line positions.

ys (required) - Sequence of Measurement

Y-Coordinates: A sequence y-coordinates that represent the horizontal line positions.

Examples

```
<grid xs="lin 2in 3in 4in 5in 6in" ys="7in 7.2in 7.4in 7.6in 7.8in 8.0in"/>
(Extracted from file tag-grid.rml, line 13)
```

h1

Heading 1 is a simple paragraph with a special heading 1 style.

Attributes

fontName - String

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

Content

XMLContent (required)

Text: The text that will be layed out.

h2

Heading 2 is a simple paragraph with a special heading 2 style.

Attributes

fontName - String

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

Content

XMLContent (required)

Text: The text that will be layed out.

h3

Heading 3 is a simple paragraph with a special heading 3 style.

Attributes

fontName - String

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

Content

XMLContent (required)

Text: The text that will be layed out.

hr

Create a horizontal line on the page.

Attributes

width - Measurement

Width: The width of the line on the page.

```
thickness - Measurement
```

Thickness: Line Thickness

color - Color

Color: The color of the line.

lineCap - Choice of ('default', 'square', 'round', 'butt')

Cap: The cap at the end of the line.

spaceBefore - Measurement

Space Before: The vertical space before the line.

spaceAfter - Measurement

Space After: The vertical space after the line.

align - Choice of ('decimal', 'right', 'center', 'centre', 'left')

Alignment: The alignment of the line within the frame.

valign - Choice of ('middle', 'top', 'bottom')

Vertical Alignment: The vertical alignment of the line.

dash - Sequence of Measurement

Dash-Pattern: The dash-pattern of a line.

illustration

Inserts an illustration with graphics elements.

Attributes

width (required) - Measurement

Width: The width of the illustration.

height (required) - Measurement

Height: The height of the illustration.

image

Draws an external image on the canvas.

Attributes

file (required) - Image

File: Reference to the external file of the iamge.

x (required) - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the shape.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the shape.

width - Measurement

Width: The width of the image.

height - Measurement

Height: The height of the image.

showBoundary - Boolean

Show Boundary: A flag determining whether a border should be drawn around the image.

preserveAspectRatio - Boolean

Preserve Aspect Ratio: A flag determining whether the image's aspect ration should be conserved under any circumstances.

Examples

```
<image file="[z3c.rml.tests]/input/zope3logo.gif" x="2in" y="2in" width="0.5in"
    height="3in"/>
(Extracted from file tag-image.rml, line 20)
```

imageAndFlowables

An image with flowables around it.

Attributes

imageName (required) - Image

Image: The file that is used to extract the image data.

imageWidth - Measurement

Image Width: The width of the image.

imageHeight - Measurement

Image Height: The height the image.

imageMask - Color

Mask: The height the image.

imageLeftPadding - Measurement

Image Left Padding: The padding on the left side of the image.

imageRightPadding - Measurement

Image Right Padding: The padding on the right side of the image.

imageTopPadding - Measurement

Image Top Padding: The padding on the top of the image.

imageBottomPadding - Measurement

Image Bottom Padding: The padding on the bottom of the image.

imageSide - Choice of ('right', 'left')

Image Side: The side at which the image will be placed.

indent

Indent the contained flowables.

Attributes

left - Measurement

Left: The indentation to the left.

right - Measurement

Right: The indentation to the right.

initialize

Do some RML processing initialization.

Sub-Directives

name (ZeroOrMore)
alias (ZeroOrMore)

keepInFrame

Ask a flowable to stay within the frame.

Attributes

maxWidth - Measurement

Maximum Width: The maximum width the flowables are allotted.

maxHeight - Measurement

Maximum Height: The maximum height the flowables are allotted.

mergeSpace - Boolean

Merge Space: A flag to set whether the space should be merged.

onOverflow - Choice of ('overflow', 'shrink', 'truncate', 'error')

On Overflow: Defines what has to be done, if an overflow is detected.

id - Text

Name/Id: The name/id of the flowable.

frame - StringOrInt

Frame: The frame to which the flowable should be fitted.

label

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dy - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

boxStrokeWidth - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

leading - Measurement

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

visible - Boolean

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

row - Integer

col - Integer

format - String

dR - Float

Content

TextNode

label

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dy - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

boxStrokeWidth - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

leading - Measurement

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

visible - Boolean

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

Content

TextNode (required)

Text: The label text to be displayed.

label

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dv - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

boxStrokeWidth - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

leading - Measurement

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

visible - Boolean

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

Content

TextNode

label

A label for the chart.

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dv - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

box Stroke Width - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

leading - Measurement

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

visible - Boolean

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

x - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the label.

y - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the label.

Content

TextNode (required)

Text: The label text to be displayed.

labels

A set of labels.

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dy - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

boxStrokeWidth - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

```
leading - Measurement
```

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

visible - Boolean

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

x - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the label.

y - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the label.

Sub-Directives

label (ZeroOrMore)

labels

Sub-Directives

label (OneOrMore)

line

Attributes

strokeWidth - Measurement

strokeColor - Color

strokeDashArray - Sequence of Float

symbol - Symbol

name - Text

lineMode

Set the line mode for the following graphics elements.

Attributes

width - Measurement

Width: The line width.

dash - Sequence of Measurement

Dash-Pattern: The dash-pattern of a line.

miterLimit - Measurement

Miter Limit: The ???.

join - Choice of ('bevelled', 'mitered', 'round')

Join: The way lines are joined together.

cap - Choice of ('default', 'square', 'round', 'butt')

Cap: The cap is the description of how the line-endings look.

linePlot

Attributes

dx - Measurement

Drawing X-Position: The x-position of the entire drawing on the canvas.

dy - Measurement

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

dheight - Measurement

Drawing Height: The height of the entire drawing

angle - Float

Angle: The orientation of the drawing as an angle in degrees.

x - Measurement

Chart X-Position: The x-position of the chart within the drawing.

y - Measurement

Chart Y-Position: The y-position of the chart within the drawing.

width - Measurement

Chart Width: The width of the chart.

height - Measurement

Chart Height: The height of the chart.

strokeColor - Color

Stroke Color: Color of the chart border.

strokeWidth - Measurement

Stroke Width: Width of the chart border.

fillColor - Color

Fill Color: Color of the chart interior.

debug - Boolean

Debugging: A flag that when set to True turns on debug messages.

reversePlotOrder - Boolean

lineLabelNudge - Measurement

lineLabelFormat - String

joinedLines - Boolean

Sub-Directives

data (One)

lines (ZeroOrOne)

xValueAxis (ZeroOrOne)

yValueAxis (ZeroOrOne)

lineLabels (ZeroOrOne)

texts (ZeroOrOne)

lineStyle

Define the border line style of each cell.

```
start (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
     Start Coordinates: The start table coordinates for the style instruction
   stop (required) - Sequence of Combination of Integer, Choice of ('splitfirst', 'splitlast')
     End Coordinates: The end table coordinates for the style instruction
   kind (required) - Choice of ('box', 'outline', 'innergrid', 'linebefore', 'lineabove', 'lineablow', 'lineafter',
     Kind: The kind of line actions to be taken.
   thickness (required) - Measurement
      Thickness: Line Thickness
   colorName (required) - Color
     Color: The color of the border line.
   cap (required) - Choice of ('default', 'square', 'round', 'butt')
     Cap: The cap at the end of a border line.
   dash - Sequence of Measurement
     Dash-Pattern: The dash-pattern of a line.
   join - Choice of ('bevelled', 'mitered', 'round')
     Join: The way lines are joined together.
   count - Integer
     Count: Describes whether the line is a single (1) or double (2) line.
lines
Attributes
   strokeWidth - Measurement
   strokeColor - Color
   strokeDashArray - Sequence of Float
   symbol - Symbol
Sub-Directives
   line (OneOrMore)
Examples
   es>
      1in 7in 6in 7in
      1in 5in 6in 4in
      1in 3in 1in 1in
   </lines>
   (Extracted from file tag-lines.rml, line 9)
A path of connected lines drawn on the canvas.
   TextNodeGrid with 4 cols of Measurement (required)
```

Content

Line List: A list of lines coordinates to draw.

Examples

```
es>
  1in 7in 6in 7in
  1in 5in 6in 4in
  1in 3in 1in 1in
</lines>
(Extracted from file tag-lines.rml, line 9)
```

link

Place an internal link around a set of flowables.

Attributes

```
    destination - Text
        Destination: The name of the destination to link to.
    url - Text
        URL: The URL to link to.
    boxStrokeWidth - Measurement
        Box Stroke Width: The width of the box border line.
    boxStrokeDashArray - Sequence of Float
        Box Stroke Dash Array: The dash array of the box border line.
```

boxStrokeColor - Color

Box Stroke Color: The color in which the box border is drawn.

Examples

moveto

Move the path cursor to the specified location.

Content

```
TextNodeSequence of Measurement (required)

Position: Position to which the path pointer is moved to.
```

name

Defines a name for a string.

Attributes

```
id (required) - StringId: The id under which the value will be known.value (required) - TextValue: The text that is displayed if the id is called.
```

name

Content

```
TextNode (required)
Text:
```

nextFrame

Switch to the next frame.

Attributes

name - StringOrInt

Name: The name or index of the next frame.

nextPage

Switch to the next page.

option

An option in the select field.

Content

TextNode (required)

Value: The value of the option.

outlineAdd

Add a new entry to the outline of the PDF.

Attributes

key - String

Key: The unique key of the item.

level - Integer

Level: The level in the outline tree.

closed - Boolean

Closed: A flag to determine whether the sub-tree is closed by default.

Content

TextNode (required)

drawString (ZeroOrMore)

Title: The text displayed for this item.

pageDrawing

Draws directly on the content of one page's canvas. Every call of this directive creates a new page.

Sub-Directives

drawRightString (ZeroOrMore) drawCenteredString (ZeroOrMore) drawCentredString (ZeroOrMore) drawAlignedString (ZeroOrMore) ellipse (ZeroOrMore) circle (ZeroOrMore) rect (ZeroOrMore) grid (ZeroOrMore) lines (ZeroOrMore) curves (ZeroOrMore) image (ZeroOrMore) place (ZeroOrMore) textAnnotation (ZeroOrMore) path (ZeroOrMore) **fill** (ZeroOrMore) stroke (ZeroOrMore) setFont (ZeroOrMore) scale (ZeroOrMore)

translate (ZeroOrMore)
rotate (ZeroOrMore)
skew (ZeroOrMore)

```
transform (ZeroOrMore)
lineMode (ZeroOrMore)
barCode (ZeroOrMore)
textField (ZeroOrMore)
buttonField (ZeroOrMore)

barChart (ZeroOrMore)
barChart3D (ZeroOrMore)
linePlot (ZeroOrMore)
pieChart (ZeroOrMore)
pieChart3D (ZeroOrMore)
spiderChart (ZeroOrMore)
```

pageGraphics

Define the page graphics for the page template.

pageInfo

Set's up page-global settings.

Attributes

```
pageSize (required) - PageSize
Page Size: The page size of all pages within this document.
```

pageTemplate

Define a page template.

Attributes

Sub-Directives

```
frame (OneOrMore)
pageGraphics (ZeroOrOne)
```

para

Lays out an entire paragraph.

Attributes

```
fontName - String
```

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

Content

XMLContent (required)

Text: The text that will be layed out.

paraStyle

Defines a paragraph style and gives it a name.

Attributes

fontName - String

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

name (required) - String

Name: The name of the style.

alias - String

Alias: An alias under which the style will also be known as.

parent - Style

Parent: The apragraph style that will be used as a base for this one.

path

Create a line path.

Attributes

x (required) - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the shape.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the shape.

fill - Boolean

Fill: A flag to specify whether the shape should be filled.

stroke - Boolean

Stroke: A flag to specify whether the shape's outline should be drawn.

close - Boolean

Close Path: A flag specifying whether the path should be closed.

Content

TextNodeGrid with 2 cols of Measurement (required) *Points*: A list of coordinate points that define th path.

Sub-Directives

```
moveto (ZeroOrMore)
curvesto (ZeroOrMore)
```

Examples

```
<path x="2cm" y="15cm" fill="true">
 8cm 15cm
  <curvesto>
    10cm 15cm 10cm 12cm 8cm 12cm
  </curvesto>
 2cm 12cm
  <moveto>
    2cm 15cm
 </moveto>
</path>
```

(Extracted from file tag-path.rml, line 38)

pieChart

Attributes

dx - Measurement

Drawing X-Position: The x-position of the entire drawing on the canvas.

dy - Measurement

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

dheight - Measurement

Drawing Height: The height of the entire drawing

angle - Float

Angle: The orientation of the drawing as an angle in degrees.

x - Measurement

Chart X-Position: The x-position of the chart within the drawing.

y - Measurement

Chart Y-Position: The y-position of the chart within the drawing.

width - Measurement

Chart Width: The width of the chart.

height - Measurement

Chart Height: The height of the chart.

strokeColor - Color

Stroke Color: Color of the chart border.

strokeWidth - Measurement

Stroke Width: Width of the chart border.

fillColor - Color

Fill Color: Color of the chart interior.

debug - Boolean

Debugging: A flag that when set to True turns on debug messages.

startAngle - Integer

Start Angle: The start angle in the chart of the first slice in degrees.

direction - Choice of ('clockwise', 'anticlockwise')

checkLabelOverlap - Boolean

pointerLabelMode - Choice of ('none', 'leftandright', 'leftright')

sameRadii - Boolean

orderMode - Choice of ('alternate', 'fixed')

xradius - Measurement

yradius - Measurement

Drawing X-Position: The x-position of the entire drawing on the canvas.

```
dv - Measurement
```

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

dheight - Measurement

Drawing Height: The height of the entire drawing

angle - Float

Angle: The orientation of the drawing as an angle in degrees.

x - Measurement

Chart X-Position: The x-position of the chart within the drawing.

y - Measurement

Chart Y-Position: The y-position of the chart within the drawing.

width - Measurement

Chart Width: The width of the chart.

height - Measurement

Chart Height: The height of the chart.

strokeColor - Color

Stroke Color: Color of the chart border.

strokeWidth - Measurement

Stroke Width: Width of the chart border.

fillColor - Color

Fill Color: Color of the chart interior.

debug - Boolean

Debugging: A flag that when set to True turns on debug messages.

startAngle - Integer

Start Angle: The start angle in the chart of the first slice in degrees.

direction - Choice of ('clockwise', 'anticlockwise')

checkLabelOverlap - Boolean

pointerLabelMode - Choice of ('none', 'leftandright', 'leftright')

sameRadii - Boolean

orderMode - Choice of ('alternate', 'fixed')

xradius - Measurement

yradius - Measurement

perspective - Float

depth_3d - Measurement

angle_3d - Float

Sub-Directives

slices (One)

texts (ZeroOrOne)

place

Draws a set of flowables on the canvas within a given region.

Attributes

x (required) - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the place.

y (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the place.

```
width - Measurement
```

Width: The width of the place.

height - Measurement

Height: The height of the place.

Examples

plugInFlowable

Inserts a custom flowable developed in Python.

Attributes

```
module (required) - String
```

Module: The Python module in which the flowable is located.

function (required) - String

Function: The name of the factory function within the module that returns the custom flowable.

Content

TextNode

Parameters: A list of parameters encoded as a long string.

pointer

Attributes

```
strokeColor - Color
strokeWidth - Measurement
elbowLength - Measurement
edgePad - Measurement
piePad - Measurement
```

pre

A preformatted text, similar to the tag in HTML.

Attributes

```
style (required) - Style
```

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

Content

RawXMLContent (required)

Text: The text that will be layed out.

pto

A container for flowables decorated with trailer & header lists. If the split operation would be called then the trailer and header lists are injected before and after the split. This allows specialist "please turn over" and "continued from previous" like behaviours.

rect

Draws an ellipse on the canvas.

Attributes

x (required) - Measurement

X-Coordinate: The X-coordinate of the lower-left position of the shape.

v (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the shape.

fill - Boolean

Fill: A flag to specify whether the shape should be filled.

stroke - Boolean

Stroke: A flag to specify whether the shape's outline should be drawn.

width (required) - Measurement

Width: The width of the rectangle.

height (required) - Measurement

Height: The height of the rectangle.

round - Measurement

Corner Radius: The radius of the rounded corners.

Examples

```
<rect x="8cm" y="20cm" width="5cm" height="3cm"/>
(Extracted from file tag-rectange.rml, line 9)
```

registerCidFont

Register a new CID font given the face name.

Attributes

faceName (required) - String

Face Name: The name of the face the font uses. The face has to be previously registered.

registerFont

Register a new font based on a face and encoding.

Attributes

name (required) - String

Name: The name under which the font can be used in style declarations or other parameters that lookup a font.

faceName (required) - String

Face Name: The name of the face the font uses. The face has to be previously registered.

encName (required) - String

Encoding Name: The name of the encoding to be used.

registerTTFont

Register a new TrueType font given the TT file and face name.

Attributes

faceName (required) - String

Face Name: The name of the face the font uses. The face has to be previously registered.

fileName (required) - String

File Name: File path of the of the TrueType font.

registerType1Face

Register a new Type 1 font face.

Attributes

afmFile (required) - String

```
AFM File: Path to AFM file used to register the Type 1 face.
```

```
pfbFile (required) - String
```

PFB File: Path to PFB file used to register the Type 1 face.

rotate

Rotate the drawing counterclockwise.

Attributes

```
degrees (required) - Measurement Angle: The angle in degrees.
```

scale

Scale the drawing using x and y scaling factors.

Attributes

```
    sx (required) - Float
        X-Scaling-Factor: The scaling factor applied on x-coordinates.

    sy (required) - Float
        Y-Scaling-Factor: The scaling factor applied on y-coordinates.
```

selectField

A selection field within the PDF

Attributes

Sub-Directives

```
option (ZeroOrMore)
```

Examples

series

A one-dimensional series.

Content

```
TextNodeSequence of Float (required)
```

Values: Numerical values representing the series' data.

series

A two-dimensional series.

Content

TextNodeGrid with 2 cols of Float (required) Values: Numerical values representing the series' data.

setFont

Set the font name and/or size.

Attributes

name (required) - String
Font Name: The name of the font as it was registered.

size (required) - Measurement

Size: The font size.

leading - Measurement *Leading*: The font leading.

setNextFrame

Define the next frame to switch to.

Attributes

name (required) - StringOrInt

Name: The name or index of the next frame.

setNextTemplate

Define the next page template to use.

Attributes

name (required) - StringOrInt
Name: The name or index of the next page template.

skew

Skew the drawing.

Attributes

alpha (required) - Measurement

Alpha: The amount to skew the drawing in the horizontal.

beta (required) - Measurement

Beta: The amount to skew the drawing in the vertical.

slice

Attributes

strokeWidth - Measurement

fillColor - Color

strokeColor - Color

strokeDashArray - Sequence of Float

popout - Measurement

fontName - String

fontSize - Measurement

labelRadius - Measurement

```

  fontName - String
  fontSize - Measurement
```

labelRadius - Measurement **fillColorShaded** - Color

Sub-Directives

slice (OneOrMore)

spacer

Creates a vertical space in the flow.

Attributes

width - Measurement

Width: The width of the spacer. Currently not implemented.

length (required) - Measurement

Length: The height of the spacer.

spiderChart

Attributes

dx - Measurement

Drawing X-Position: The x-position of the entire drawing on the canvas.

dv - Measurement

Drawing Y-Position: The y-position of the entire drawing on the canvas.

dwidth - Measurement

Drawing Width: The width of the entire drawing

dheight - Measurement

Drawing Height: The height of the entire drawing

angle - Float

Angle: The orientation of the drawing as an angle in degrees.

x - Measurement

Chart X-Position: The x-position of the chart within the drawing.

y - Measurement

Chart Y-Position: The y-position of the chart within the drawing.

width - Measurement

Chart Width: The width of the chart.

height - Measurement

Chart Height: The height of the chart.

strokeColor - Color

Stroke Color: Color of the chart border.

strokeWidth - Measurement

Stroke Width: Width of the chart border.

fillColor - Color

Fill Color: Color of the chart interior.

debug - Boolean

Debugging: A flag that when set to True turns on debug messages.

startAngle - Integer

direction - Choice of ('clockwise', 'anticlockwise')

Sub-Directives

labelRadius - Measurement

visible - Measurement

spokeLabels

A set of spoke labels.

Attributes

dx - Measurement

Horizontal Extension: The width of the label.

dy - Measurement

Vertical Extension: The height of the label.

angle - Float

Angle: The angle to rotate the label.

boxAnchor - Choice of ('c', 'e', 'sw', 'ne', 'n', 's', 'w', 'autox', 'autoy', 'se', 'nw')

Box Anchor: The position relative to the label.

boxStrokeColor - Color

Box Stroke Color: The color of the box border line.

boxStrokeWidth - Measurement

Box Stroke Width: The width of the box border line.

boxFillColor - Color

Box Fill Color: The color in which the box is filled.

boxTarget - Text

Box Target: The box target.

fillColor - Color

Fill Color: The color in which the label is filled.

strokeColor - Color

Stroke Color: The color of the label.

strokeWidth - Measurement

Stroke Width: The width of the label line.

frontName - String

Font Name: The font used to print the value.

frontSize - Measurement

Font Size: The size of the value text.

leading - Measurement

Leading: The height of a single text line. It includes character height.

width - Measurement

Width: The width the label.

maxWidth - Measurement

Maximum Width: The maximum width the label.

height - Measurement

Height: The height the label.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

```
visible - Boolean
```

Visible: A flag making the label text visible.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

Sub-Directives

label (OneOrMore)

spokes

A collection of spokes.

Attributes

strokeWidth - Measurement

fillColor - Color

strokeColor - Color

strokeDashArray - Sequence of Float

labelRadius - Measurement

stylesheet

A styleheet defines the styles that can be used in the document.

Sub-Directives

initialize (ZeroOrOne)
paraStyle (ZeroOrMore)
blockTableStyle (ZeroOrMore)

td

A table cell within a table.

Attributes

fontName - String

Font Name: The name of the font for the cell.

fontSize - Measurement

Font Size: The font size for the text of the cell.

leading - Measurement

Leading: The height of a single text line. It includes character height.

fontColor - Color

Font Color: The color in which the text will appear.

leftPadding - Measurement

Left Padding: The size of the padding on the left side.

rightPadding - Measurement

Right Padding: The size of the padding on the right side.

topPadding - Measurement

Top Padding: The size of the padding on the top.

bottomPadding - Measurement

Bottom Padding: The size of the padding on the bottom.

background - Color

Background Color: The color to use as the background for the cell.

align - Choice of ('decimal', 'right', 'center', 'centre', 'left')

Text Alignment: The text alignment within the cell.

vAlign - Choice of ('middle', 'top', 'bottom')

Vertical Alignment: The vertical alignment of the text within the cell.

lineBelowThickness - Measurement

Line Below Thickness: The thickness of the line below the cell.

lineBelowColor - Color

Line Below Color: The color of the line below the cell.

lineBelowCap - Choice of ('default', 'square', 'round', 'butt')

Line Below Cap: The cap at the end of the line below the cell.

lineBelowCount - Integer

Line Below Count: Describes whether the line below is a single (1) or double (2) line.

lineBelowSpace - Measurement

Line Below Space: The space of the line below the cell.

lineAboveThickness - Measurement

Line Above Thickness: The thickness of the line above the cell.

lineAboveColor - Color

Line Above Color: The color of the line above the cell.

lineAboveCap - Choice of ('default', 'square', 'round', 'butt')

Line Above Cap: The cap at the end of the line above the cell.

lineAboveCount - Integer

Line Above Count: Describes whether the line above is a single (1) or double (2) line.

lineAboveSpace - Measurement

Line Above Space: The space of the line above the cell.

lineLeftThickness - Measurement

Left Line Thickness: The thickness of the line left of the cell.

lineLeftColor - Color

Left Line Color: The color of the line left of the cell.

lineLeftCap - Choice of ('default', 'square', 'round', 'butt')

Line Left Cap: The cap at the end of the line left of the cell.

lineLeftCount - Integer

Line Left Count: Describes whether the left line is a single (1) or double (2) line.

lineLeftSpace - Measurement

Line Left Space: The space of the line left of the cell.

lineRightThickness - Measurement

Right Line Thickness: The thickness of the line right of the cell.

$line Right Color - {\rm Color}$

Right Line Color: The color of the line right of the cell.

lineRightCap - Choice of ('default', 'square', 'round', 'butt')

Line Right Cap: The cap at the end of the line right of the cell.

lineRightCount - Integer

Line Right Count: Describes whether the right line is a single (1) or double (2) line.

lineRightSpace - Measurement

Line Right Space: The space of the line right of the cell.

Content

RawXMLContent (required)

Content: The content of the cell; can be text or any flowable.

template

Define a page template.

Attributes

pagesize - PageSize

Page Size: The Page Size.

rotation - Integer

Rotation: The rotation of the page in multiples of 90 degrees.

leftMargin - Measurement

Left Margin: The left margin of the template.

rightMargin - Measurement

Right Margin: The right margin of the template.

topMargin - Measurement

Top Margin: The top margin of the template.

bottomMargin - Measurement

Bottom Margin: The bottom margin of the template.

showBoundary - Boolean

Show Boundary: A flag to show the boundary of the template.

allowSplitting - Boolean

Allow Splitting: A flag to allow splitting over multiple templates.

title - Text

Title: The title of the PDF document.

author - Text

Author: The author of the PDF document.

Sub-Directives

```
pageTemplate (OneOrMore)
```

text

Draw a text on the chart.

Attributes

```
x (required) - Measurement
```

X-Coordinate: The X-coordinate of the lower-left position of the text.

v (required) - Measurement

Y-Coordinate: The Y-coordinate of the lower-left position of the text.

angle - Float

Rotation Angle: The angle about which the text will be rotated.

fontName - String

Font Name: The name of the font.

fontSize - Measurement

Font Size: The font size for the text.

fillColor - Color

Fill Color: The color in which the text will appear.

textAnchor - Choice of ('start', 'boxauto', 'end', 'middle')

Text Anchor: The position in the text to which the coordinates refer.

Content

TextNode (required)

Text: The text to be printed.

textAnnotation

Writes a low-level text annotation into the PDF.

Attributes

```
contents (required) - FirstLevelTextNode
```

Contents: The PDF commands that are inserted as annotation.

Sub-Directives

(ZeroOrMore)

Examples

```
<textAnnotation>
  <param name="Rect">0,0,1,1</param>
  <param name="F">3</param>
  <param name="escape">6</param>
X::PDF
PX(S)
MT(PINK)
</textAnnotation>
(Extracted from file tag-textAnnotation.rml, line 8)
```

textField

A text field within the PDF

Attributes

```
title (required) - Text Title: The title of the field.
```

```
x (required) - Measurement
```

X-Position: The x-position of the lower-left corner of the field.

y (required) - Measurement

Y- \bar{P} osition: The y-position of the lower-left corner of the field.

width (required) - Measurement

Width: The width of the text field.

height (required) - Measurement

Height: The height of the text field.

value - Text

Value: The default text value of the field.

maxLength - Integer

Maximum Length: The maximum amount of characters allowed in the field.

multiline - Boolean

Multiline: A flag when set allows multiple lines within the field.

Examples

texts

A set of texts drawn on the chart.

Sub-Directives

text (ZeroOrMore)

title

The title is a simple paragraph with a special title style.

Attributes

fontName - String

Font Name: The name of the font for the paragraph.

fontSize - Measurement

Font Size: The font size for the text of the paragraph.

leading - Measurement

Leading: The height of a single paragraph line. It includes character height.

leftIndent - Measurement

Left Indentation: General indentation on the left side.

rightIndent - Measurement

Right Indentation: General indentation on the right side.

firstLineIndent - Measurement

First Line Indentation: The indentation of the first line in the paragraph.

spaceBefore - Measurement

Space Before: The vertical space before the paragraph.

spaceAfter - Measurement

Space After: The vertical space after the paragraph.

alignment - Choice of ('right', 'justify', 'center', 'centre', 'left')

Alignment: The text alignment.

bulletFontName - String

Bullet Font Name: The font in which the bullet character will be rendered.

bulletFontSize - Measurement

Bullet Font Size: The font size of the bullet character.

bulletIndent - Measurement

Bullet Indentation: The indentation that is kept for a bullet point.

textColor - Color

Text Color: The color in which the text will appear.

backColor - Color

Background Color: The background color of the paragraph.

keepWithNext - Boolean

Keep with Next: When set, this paragraph will always be in the same frame as the following flowable.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

Content

XMLContent (required)

Text: The text that will be layed out.

tr

A table row in the block table.

Sub-Directives

td (OneOrMore)

transform

A full 2-D matrix transformation

Content

TextNodeSequence of Float (required)

Matrix: The transformation matrix.

translate

Translate the drawing coordinates by the specified x and y offset.

Attributes

dx (required) - Measurement

X-Offset: The amount to move the drawing to the right.

dy (required) - Measurement

Y-Offset: The amount to move the drawing upward.

valueAxis

Attributes

visible - Boolean

visibleAxis - Boolean

visibleTicks - Boolean

visibleLabels - Boolean

visibleGrid - Boolean

strokeWidth - Measurement

```
strokeColor - Color
  strokeDashArray - Sequence of Float
  gridStrokeWidth - Measurement
  gridStrokeColor - Color
  gridStrokeDashArray - Sequence of Float
  gridStart - Measurement
  gridEnd - Measurement
  style - Choice of ('stacked', 'parallel', 'parallel_3d')
  forceZero - Boolean
  minimumTickSpacing - Measurement
  maximumTicks - Integer
  labelTextFormat - String
  labelTextPostFormat - Text
  labelTextScale - Float
  valueMin - Float
  valueMax - Float
  valueStep - Float
  valueSteps - Measurement
  rangeRound - Text
  zrangePref - Float
xValueAxis
Attributes
  visible - Boolean
  visibleAxis - Boolean
   visibleTicks - Boolean
   visibleLabels - Boolean
  visibleGrid - Boolean
  strokeWidth - Measurement
  strokeColor - Color
  strokeDashArray - Sequence of Float
  gridStrokeWidth - Measurement
  gridStrokeColor - Color
  gridStrokeDashArray - Sequence of Float
  gridStart - Measurement
  gridEnd - Measurement

  forceZero - Boolean
  minimumTickSpacing - Measurement
  maximumTicks - Integer
  labelTextFormat - String
  labelTextPostFormat - Text
  labelTextScale - Float
```

```
valueMin - Float
valueMax - Float
valueStep - Float
valueSteps - Measurement
rangeRound - Text
zrangePref - Float
tickUp - Measurement
tickDown - Measurement
joinAxis - Boolean
joinAxisMode - Choice of ('top', 'points', 'none', 'value', 'bottom')
joinAxisPos - Measurement
```

xpre

A preformatted text that allows paragraph markup.

Attributes

style (required) - Style

Style: The paragraph style that is applied to the paragraph. See the ``paraStyle`` tag for creating a paragraph style.

bulletText - String

Bullet Character: The bullet character is the ASCII representation of the symbol making up the bullet in a listing.

dedent - Integer

Dedent: Number of characters to be removed in front of every line of the text.

Content

RawXMLContent (required)
Text: The text that will be layed out.

vValueAxis

Attributes

visible - Boolean

visibleAxis - Boolean

visibleTicks - Boolean

visibleLabels - Boolean

visibleGrid - Boolean

strokeWidth - Measurement

strokeColor - Color

strokeDashArray - Sequence of Float

gridStrokeWidth - Measurement

gridStrokeColor - Color

gridStrokeDashArray - Sequence of Float

gridStart - Measurement

gridEnd - Measurement
